Career Summary

Over a professional career spanning 16 years, I have designed, supplied, installed, commissioned, rehabilitated and troubleshot water and wastewater treatment infrastructure across Pakistan and abroad. This work spans effluent treatment plants (ETPs), combined effluent treatment plants (CETPs), sewage treatment plants (STPs), reverse osmosis (RO) systems, DAF systems, sludge dewatering systems, self-cleaning screening systems, fine bubble aeration diffusion, and biological/tertiary treatment upgrades.

My clientele includes leading names in the leather & tanning, textile & denim, apparel, food & beverage, fertilizer, healthcare, and sugar industries — including multinational operations such as Coca-Cola, Pepsi-Cola International, Interloop, and Agha Khan Hospital, as well as project work delivered for clients in Indonesia. Equipment and process technologies deployed on these projects have been sourced through partnerships with Italian, Turkish, US, and Australian manufacturers, reflecting an internationally-informed approach to plant design and process engineering.

This body of work has been delivered under three business platforms — Sustainable Water Solutions (Pvt) Ltd (SWS), Kemtek Traders, and WETS (Water and Energy Technical Solutions) — reflecting a consistent focus on sustainable, reliable, and locally-adapted water treatment solutions. The following pages present the complete project track record, arranged chronologically.
